

Luna Beauty

Salon Booking Website Template — Documentation

A responsive salon and beauty business website built with Next.js, TypeScript, CSS, and Lucide React. Its main conversion flow is a booking form that prepares a WhatsApp message.

1. Included Features

- Responsive desktop, tablet, and mobile layout
- Hero, services, about, gallery, testimonials, booking, and footer sections
- Service cards with price and duration
- Booking form with date and preferred time
- Automatic WhatsApp message generation
- Mobile navigation
- No database or backend required

2. Before You Start

Recommended: Node.js 20 or newer and npm. Extract the source ZIP, open a terminal in the project folder, then install dependencies.

```
npm install
npm run dev
```

Open <http://localhost:3000>.

3. Customize WhatsApp Number

Open `components/SalonPage.tsx` and find:

```
const WHATSAPP_NUMBER = "6281234567890";
```

Use international format without +, spaces, or hyphens.

4. Customize Services

Edit the services array in `components/SalonPage.tsx`.

```
name: "Hair Cut"
price: "Rp85.000"
duration: "45 min"
description: "Potong, wash & styling."
```

5. Customize Business Information

- Business name
- Tagline
- Address
- Opening hours
- Services and prices
- Testimonials
- Footer
- Social links

6. Customize Colors

Edit the CSS variables near the top of app/globals.css: --ink, --muted, --cream, --rose, --rose-dark, --line.

5. Replace Images

The template uses remote Unsplash images as demo content. For a real business or client website, replace the demo images with photos owned by the business or images that have the appropriate commercial-use license.

The main image references are located in components/SalonPage.tsx. You can replace them with your own public image URLs or store the images locally inside the project.

5.1 Option 1 — Use Image URLs

Open:

```
components/SalonPage.tsx
```

Search for images.unsplash.com and replace the URLs with your own publicly accessible image URLs.

```
const heroImage = "https://example.com/hero.jpg";
```

Make sure the image URL is publicly accessible over HTTPS. If using next/image with a new image domain, make sure that domain is allowed by the Next.js image configuration.

5.2 Option 2 — Use Local Images

Create:

```
public/  
├─ images/  
│  ├── hero.jpg  
│  ├── about.jpg  
│  ├── gallery-1.jpg  
│  ├── gallery-2.jpg  
│  └── gallery-3.jpg
```

Place the business photos inside public/images/. Then open components/SalonPage.tsx and change the image src values.

```
src="/images/hero.jpg"  
  
src="/images/about.jpg"  
  
src="/images/gallery-1.jpg"
```

Files inside public are referenced from the site root. Do not include /public/ in the path.

5.3 Recommended Image Mapping

Section	File	Path
Hero	hero.jpg	/images/hero.jpg
About	about.jpg	/images/about.jpg
Gallery 1	gallery-1.jpg	/images/gallery-1.jpg
Gallery 2	gallery-2.jpg	/images/gallery-2.jpg
Gallery 3	gallery-3.jpg	/images/gallery-3.jpg

5.4 Complete Steps for Replacing Local Images

- Prepare the business photos.
- Create public/images/ if needed.
- Place the photos inside the folder.
- Use clear names such as hero.jpg, about.jpg, and gallery-1.jpg.
- Open components/SalonPage.tsx.
- Find the image to replace.

- Change the old URL to a local path such as `/images/hero.jpg`.
- Save and run `npm run dev`.
- Check Hero, About, and Gallery.

5.5 If an Image Does Not Appear

- Check the file name and path exactly.
- Make sure the file is inside `public/images/`.
- Use `/images/file-name.jpg`, not `/public/images/file-name.jpg`.
- Check the extension (`.jpg`, `.jpeg`, `.png`, `.webp`).
- Restart the development server.
- For external URLs, make sure the URL is accessible and the domain is allowed by Next.js.

5.6 Image Licensing

The demo images are for demonstration only. For a production or client website, use business-owned photos, client-provided photos, stock images with an appropriate license, or assets you have permission to use commercially. Do not use copyrighted images without permission.

7. Booking Flow

- Customer chooses a service.
- Customer fills in name and WhatsApp number.
- Customer chooses date and preferred time.
- Customer optionally adds a note.
- Template generates a WhatsApp message.
- WhatsApp opens with booking details pre-filled.
- Business confirms availability manually.

8. What the Template Does Not Include

- Database or admin dashboard
- Automatic time-slot availability
- Authentication
- Online payment
- WhatsApp Business API
- Automatic booking confirmation
- Calendar synchronization

9. Project Structure

```
salon-booking-nextjs/
├── app/
│   ├── globals.css
│   ├── layout.tsx
│   └── page.tsx
├── components/
│   └── SalonPage.tsx
├── public/
│   └── images/ # optional local images
├── next.config.ts
├── package.json
└── tsconfig.json
```

10. Common Customization Checklist

- Business name
- Logo / brand mark
- WhatsApp number
- Address
- Opening hours
- Services
- Prices
- Service durations
- Hero image
- About image
- Gallery images
- Testimonials
- Instagram URL
- Theme colors
- Page title and description
